Attorney General

COLONEL C. L. PAGANO
Superintendent

Dear Reader:

In 1983 the State of New Jersey showed a reduction of 12.2% in fatalities as compared to 1982. We believe one of the major factors attributed to this reduction was the implementation of several alcohol awareness programs instituted throughout the state by both state and local law enforcement agencies.

The statistics for 1983 indicate a death rate of 1.8 for every 100 million miles traveled.

This data report indicates a very thorough review of the causation factors and results of all the fatal accidents throughout the state in 1983. It is hoped that this publication will aid all law enforcement agencies in their continuing desire for safety on our highways.

On the following pages you will find statistics of the fatal traffic accident records compiled by the Fatal Accident Unit of the Division of State Police for 1983.

Sincerely,

Colonel Clinton L. Pagano
Superintendent

M. ALCOHOL FACTOR

There were 932 Fatalities during 1983. Of this total, 642 were tested for alcohol and 290 were not tested. The various reasons for those not tested were: delayed deaths; age factors; contamination of samples, and the failure on the part of some investigative agencies and medical examiners to cause tests to be performed on victims. Of the Fatalities, 478 were drivers; 203 passengers; 229 pedestrians and 22 pedalcyclists. Of the 642 tested, 340 were positive for alcohol in varying degrees and 302 were negative. This would indicate 53% of the fatalities tested were positive for alcohol and 47% were negative.

The attached chart is a breakdown of victims and the percentage of alcohol in each classification. An analysis of the chart by victim classification indicates the following:

1. Drivers:

There was a total of 478 drivers killed, of which 366 were tested. Of those tested 216 were positive and 150 negative, for a 59.4% alcohol factor. The .10% and over alcohol level, has the largest number listed. Of the 216 imbibing drivers, 168 or 77.7% had an alcohol level of .10% or higher.

2. Passengers:

There was a total of 203 passengers killed, of which 115 were tested. Of those tested, 54 were positive and 61 were negative for a 46.9% positive alcohol factor.

3. Pedestrians:

There was a total of 229 pedestrians killed, of which 151 were tested. Of those tested, 70 were positive and 81 negative for a 46.4% alcohol factor.

4. Pedalcyclists:

There was a total of 22 pedalcyclists killed. Ten pedalcyclists were tested for alcohol content. Of those tested, none were positive and 10 negative for a 0.0% alcohol factor.

SPECIFIC AREAS OF CONCERN

INTERSTATE HIGHWAY FATALITIES

The Interstate Highway System of New Jersey is approximately 90.19% completed. Of the 379.03 miles of roadway which are projected for this system, 341.47 miles have been opened to the motoring public. With this number of roadway miles open through a variety of areas such as rural, urban, flat, hilly, etc., an equal variety of accidents have become prevalent. Beyond the smaller "damage to property" type of accidents we are now encountering the non-repairable . . . the human fatality. Twenty-two percent of the thirty-six (36) fatal accidents which occurred during 1983 involved pedestrians. Forty-four percent of the accidents had alcoholic beverages contribute heavily towards causing the accidents. Over the twelve month span, the death rate averaged 3.0 deaths per month, and one death for every 9.5 miles of roadway. In order to have a clear, concise picture of the type and age of victim, as well as the manner and contributing factors of these fatal motor vehicle accidents, the following facts are outlined for you.

Alcohol Involvement

Of the 22 pedalcycle fatalities, ten were tested for alcohol content. None were found to be over .10% and ten were negative. The remaining 12 were not tested due to age factors, delayed deaths, etc.

Moped Involvement

In 1983 there were four Moped Fatal Accidents, all were drivers. The ages of the victims were 13, 14, 16, and 17. There were three males and one female.

MOTORCYCLE INVOLVEMENT

There were 91,531 motorcycles registered in New Jersey during 1983, compared with 102,835 in 1982.

* One Driver Under Influence of Drugs

NEW JERSEY STATE POLICE — AGE OF MAJORITY

The enactment of Senate Bill S-992, that became effective on January 1, 1973, added over one-half million potential drinking drivers to our highways. Accident statistics are available for this age group (18 - 19 - 20); however, alcohol involvement relative to accidents is available only in accidents where fatalities occur.

Listed below are statistics indicating the involvement of drivers in accidents in the 18 to 20 year-old age group. The year 1972 is used as a base, being the year prior to the Age of Majority.

Years	Total Accidents	Total Injury Accidents	Total Fatal Accidents 18 - 20 Drivers	Total Drivers Involved	Number of Drivers Drunk or Impaired	Percent of 18-20 Drivers Drunk or Impaired

On January 2, 1980, Senate Bill S-1126 was signed into law as Chapter 260, Laws of 1979, which extends to persons 19 years of age and older the right to sell, purchase and consume alcoholic beverages. The figures below reflect those drivers in the 19-20 year-old age group.
